Financial Reconciliations

Explanation of Non-GAAP Financial Measures

The Company reports its financial results in accordance with generally accepted accounting principles in the U.S. (GAAP). However, management believes that certain non-GAAP financial measures used in managing the business may provide users of this financial information additional meaningful comparisons between current results and results in prior operating periods and between results in prior periods and expectations for future periods. Management believes that these non-GAAP financial measures can provide additional meaningful reflection of underlying trends of the business because they provide a comparison of historical information that excludes certain items that impact the overall comparability. Management also uses these non-GAAP financial measures in making financial, operating and planning decisions and in evaluating the Company's performance.

The tables below provide supplemental non-GAAP financial data and corresponding reconciliations to GAAP financial measures. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the Company's reported results prepared in accordance with GAAP.

(1) In Q3 FY19, the Company purchased a group annuity contract under which the pension benefit obligations for certain U.S. retirees and beneficiaries under the Company's pension plan were transferred to an insurer. As a result of this transaction, the pension plan's total liability has been re-measured, resulting in a non-cash settlement charge to the Company that reduced third quarter Fiscal 2019 pretax income by \$36 million.

Table 2: Reconciliation of Q4 FY19 to Q4 FY20 Margins ⁽¹⁾

FY19 Q4:	Total TJX	Marmaxx	HomeGoods	TJX Canada	TJX International

Table 6: Calculation of Return on Invested Capital

Although ROIC is a standard financial measure, numerous methods exist for calculating a company's ROIC. The method used by management to calculate our ROIC may differ from the methods used by other companies to calculate their ROIC.

In FY20, in light of new lease accounting rules, management adopted a new methodology which replaces rent expense with balance sheet lease liability and its implied interest expense. We believe that this methodology is more closely aligned with current industry and third party retail analyst methods. This methodology is different from the methods of calculating ROIC for FY19 shown below that we use for internal purposes.

Details of our FY20 and FY19 ROIC calculations are shown below under each year's respective methodologies.

Calculation for Adjusted PreTax Income	Full Year	
	FY19 (In millions)	FY20 (In millions)
Pretax Income	\$4,173	\$4,406
Pension settlement charge ⁽¹⁾	\$36

(2) Represents the Company's estimate of the interest expense we would incur if the Company's operating leases were owned or accounted for as finance leases. The interest is calculated using the implied discount rate for each lease and is recorded as a component of rent expense included within cost of sales, including buying and occupancy costs.
